Stellar Cyber 6.6.0s is now live! Discover all the updates in the release notes!

Adding a Table to Display IP Address Pairs with the Most Events

This example illustrates how to add a table that finds the source and destination IP address pairs with the most events to your custom dashboard.

For detailed explanations of the settings in this example, see **Custom Dashboard Components**.

1. Select **Dashboards | CUSTOM** and select the dashboard you want to edit.

   The dashboard appears.

2. Select **Open in Visualizer** and then select **Edit**.

   The display switches to the editing canvas.

3. Select **New table**.

   The **Chart Builder** dialog box appears with the **Chart Type** section on display and **Table** selected.

4. Select **Next** to enter the **General** section and enter the following settings:

   Chart Name: **Top 5 Source/Destination IP Address Pairs**

   Tenant: **All Tenants**

   Indices: **Alerts**

   Table Type: **Groupings**

5. Select **Next** to advance to the **Query** section, leave **Query** as **None**, and select **Next** again.

   The **Groupings** section appears.

6. Select **+ Add Grouping** twice to create a total of three groupings.

   The groupings are processed sequentially, and you can rearrange them to change the configuration.

7. Expand the **Column 1** grouping and enter the following:

Column Label: **Source IP Address**

Aggregation: **Term**; **Field**: **srcip**

Metric: **Count**

Order: **Descending**

Size: **5**

8. Expand the **Column 2** grouping and enter the following:

   Column Label: **Destination IP Address**

   Aggregation: **Term**; **Field**: **dstip**

   Metric: **Count**

   Order: **Descending**

   Size: **5**

9. Expand the **Column 3** grouping and enter the following:

   Column Label: **Total**

   Aggregation: **Metric**; **Metric**: **Count**

10. Select **Next** to save your configuration and advance to the **Options** section.
11. Leave **Rows per Page** at **20** and **Filter by event status** enabled, and then select **Submit**.

    Stellar Cyber adds the table and displays it on the editing canvas.

12. Select **Save**.

    The dashboard appears with your new table.
