Stellar Cyber 6.6.0s is now live! Discover all the updates in the release notes!

Auto-Triage Overview

The automatic triage of alerts and user-reported phishing attempts is available as part of the Early Access Program (EAP) and is only supported on Stellar Cyber in SaaS deployments.

The automatic triage of alerts and user-reported phishing are only supported on Stellar Cyber in SaaS deployments and require an add-on license, which you can request from your sales representative. If you used these features through participation in the Early Access Program, contact your sales representative to continue with an add-on license or to request that the services be disabled.

Auto-Triage features automate the analysis of ingested data using an embedded AI-powered triage agents and internal and integrated threat intelligence. Use the following topics to understand how to configure and operationalize Auto-Triage:

- **Alert Auto Triage**
- **Understanding Alert Auto Triage Performance**
- **AI Assistant**
- **Phishing Auto Triage**
- **Credential Management**

About Deployment Availability

AI-driven features are introduced in Stellar Cyber SaaS deployments. This approach enables rapid innovation and ensures consistent performance, scalability, and security for AI-intensive capabilities. SaaS environments provide the controlled infrastructure, elasticity, and update cadence required to safely operate and continuously improve these advanced features.

Stellar Cyber remains committed to supporting on-premises deployments and continues to evaluate which AI capabilities can be extended to those environments over time, based on technical feasibility and customer demand.
