Stellar Cyber 6.6.0s is now live! Discover all the updates in the release notes!

Configuring Global Shared Resources

The administrator for Stellar Cyber can pre-configure certain resources that may be shared across multiple users, such as log filter definitions, recipient lists, scripts, and traffic-based application filters (previously data filters) and application groups (previously tags). This optimizes the user process, and ensures everyone is using the same parameters, where applicable. Use the topics below for more details.

- **Configuring Data Enrichment**
- **Working with Queries and Filters**
- **Working with Watchlists**
- **Creating Saved Scripts**
- **Configuring Recipients**
- **Working with Filters**
  - Using Toolbar Filters
  - Managing Log Filters
  - Managing Traffic Filters: Applications
  - Managing Traffic Filters: Application Groups
  - Working with Queries and Filters
  - Queries and Filters
  - Pre-DPI Filters
