Index Definitions & Details

Stellar Cyber organizes data into indices, which helps to speed up your searches.

The following table lists the name of each index in Stellar Cyber, the name of the index in the Interflow data, the type of data collected in that index, and the source of the data.

Stellar Cyber provides Coverage Analyzer and Detections & Response tools that let you look up alert types by sensor, data source, application, alert name, alert type, or by XDR attributes such as kill chain stage, tactic, or technique. You can also view alert types by index in Machine Learning Alert Types by Index, which provides links to descriptions of the alert types that can appear in each available index.
