Stellar Cyber 6.6.0s is now live! Discover all the updates in the release notes!

Installation Overview

The topics in this section take you through all the procedures you need to install the Stellar Cyber solution, including installing different types of sensors, firewall ports to open for successful communications, and PDF versions of the Getting Started Guides for physical sensors.

Stellar Cyber does not support the installation of third-party software on its virtual or physical device sensors.

See the following sections for details:

- **Sensor Installation Summary**
- **Provisioning Virtual Modular Sensors**
  - Virtual Modular Sensor Provisioning and Performance
  - Provisioning Disk Space for Virtual Modular Sensors
  - Reserving Resources for Virtual Modular Sensors
  - Enabling SSSE3 for Linux-Based Sensors
- **Physical Photon Sensor Specs**
  - Physical Photon Sensor Specifications
- **Installing a Server Sensor (Agent)**
  - Server Sensor Sizing Specifications
  - Supported Sensor Operating Systems
  - Installing a Linux Server Sensor
  - Deploying Linux Server Sensors Using Ansible
  - Installing a Windows Server Sensor
  - Cloning Windows Server Sensor VMs
- **Installing a Modular Sensor**
  - Installing a Modular Sensor in VMware
  - Installing a Modular Sensor in AWS
  - Installing a Modular Sensor in Azure

- Using a Modular Sensor with Azure Virtual Network TAP (VTAP)
- Installing a Modular Sensor in GCP
- Installing a Modular Sensor in OCI
- Installing a Modular Sensor in KVM (SaaS)
- Installing a Modular Sensor in Hyper-V
- Converting Sensor Storage to Use Encryption in AWS

- **Installing Hardware Sensors (Photon)**
- **Firewall Requirements**
  - General Firewall Requirements
  - Ports to Open for Log Ingestion
- **Stellar Cyber Default Credentials**
- **Resetting a Device Sensor's Password**
- **TLS Version and Cipher Suites**
