Stellar Cyber 6.6.0s is now live! Discover all the updates in the release notes!

Overview of the Knowledge Base

The Stellar Cyber knowledge base (KB) is a comprehensive source for learning about Stellar Cyber architecture, installing the product components, configuring, maintaining them, and using the product.

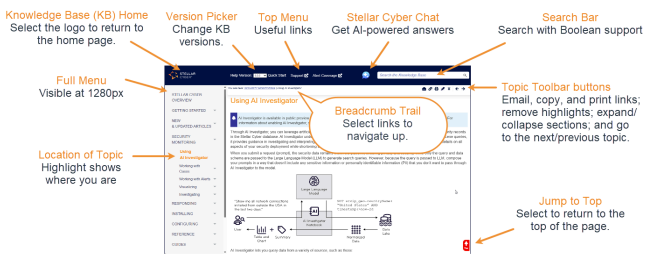

Menus

There are three types of menus to support whatever scale of browser you are using to access the knowledge base.

- The brief **Top menu** is always displayed for any browser scaled wider than a mobile screen. It provides you access to the Quick Start topic, the Stellar Cyber Customer Success Portal (Support), Alert Coverage, the Search field, and the Stellar Cyber Chat feature at all times. The Quick Start is helpful for both analysts and administrators to revisit as you learn the product.

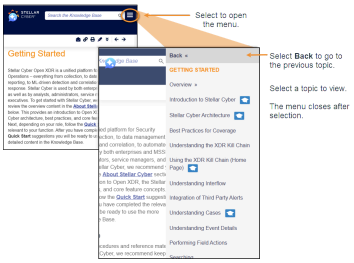

- The **Full menu** provides links to all the knowledge base content, primarily organized by how you will be interacting with the product. As you navigate topics, your location in the KB is highlighted in this menu. Use the highlighted topic title to locate context for the topic, particularly when you have opened a topic from a search link or another topic. This menu is hidden when the browser is scaled too narrowly to support both content and navigation.

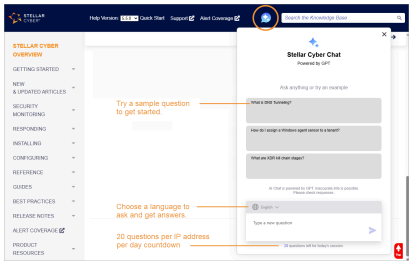

- For narrowly scaled browsers (below 1280px), the full menu is hidden and instead a dynamic **Slide out menu** with the same content is available. Access this menu by

selecting the stacked bar ☰ button to the right of the search field. Navigate by selecting chapters and topics and selecting the **Back** link to reverse your navigation steps. The menu hides automatically when you select a topic.

Stellar Cyber Chat

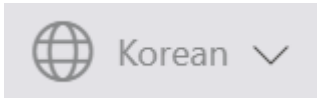

The knowledge base includes a Stellar Cyber Chat feature that lets you ask natural language questions and receive results powered by GPT artificial intelligence. You can access Stellar Cyber Chat by selecting its icon in the knowledge base top menu , as illustrated below:

Keep in mind that you are limited to a maximum of 20 questions to Stellar Cyber Chat per day, per IP address. A counter at the bottom of the Stellar Cyber Chat window shows you how many questions you have remaining.

Get Answers in Different Languages

You can use the language dropdown at the bottom of the Stellar Cyber Chat window to change the language Stellar Cyber Chat uses to answer questions, as illustrated below.

The chatbot usually recognizes the language you use to ask a question regardless of the setting of the language dropdown. However, the chatbot only answers in the language specified by the dropdown. For example, if you ask a question in Spanish with the dropdown set to **English**, the chatbot typically understands and responds to the question but does so in English. Set the dropdown to **Spanish** to get answers in Spanish. Or, alternatively, set it

to **Auto** to have the chatbot autodetect the language used and respond in the same language.

Topic Buttons

At the top of each topic, you will find buttons to help you navigate and share information.

- **Email**: If your system has email configured, you can forward the topic link using this button.
- **Copy Link**: Useful for closed sites with no email support, or to send the link in a chat client, you can use this button copy a link to the topic.
- **Print**: Print the topic to a configured printer or to a PDF with this button.
- **Remove Highlight**: If you have opened the page from a KB Search result, the page has your first two search terms highlighted. The first search term is gold, the second is light purple. If you want, you can clear those highlights by selecting this button. Try it! Here is some highlighted text. Select the highlight button on the toolbar at the top of this page.
- **Expand / Collapse**: Some of the KB pages have information that can be dynamically displayed or hidden. The text preceding the hidden information guides you to select it for display. You can select these buttons to expand all dynamic content on a page or hide it all.

  Try it! This text is hidden by default.
- Navigate to the **previous** topic or **next** topic. These buttons navigate you to the topic immediately before or after the current topic, based on its location in the KB menu.

Special Icons

The knowledge base content includes icons that are present in the Stellar Cyber UI. The icons below are specific to the knowledge base, to help alert you to key information.

- In some cases, the knowledge base links to useful resources on other websites. This icon alerts you to understand that the link is to another website.
- When a link to an external website requires login credentials, the lock icon is used instead of the above icon.
- A video camera icon indicates the linked item contains video content.
- The mortar board icon signifies that related training courses and lessons are available for the documentation section where it appears. Online training is available at Stellar Cyber Academy .
- A light bulb icon is used to indicate tips.
- A pencil icon is used to indicate notes.
- An exclamation symbol is used to indicate cautionary information.

- A bell indicates that a feature is only available as part of an Early Access Program and may not be available in your version of the Stellar Cyber Platform. Contact your account manager to inquire about taking part in an Early Access Program.

Version Flags

The knowledge base uses color-coded version flags to call your attention to new and updated topics and sections:

- 5.4.0 – Green version flags indicate topics or sections that were entirely new in the indicated release.
- 5.4.0 – Yellow version flags indicate topics or sections that were modified in the indicated release.

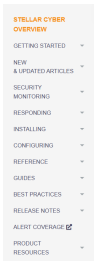

You can use version flags together with the **New Articles** entries in the KB's Table of Contents to locate new and updated material quickly.

Keep in mind that version flags are not intended as a complete historical record of changes to the KB. Instead, they help point out new and modified material in recent releases that is particularly noteworthy. Stellar Cyber removes older version flags over time once they have served their purpose.

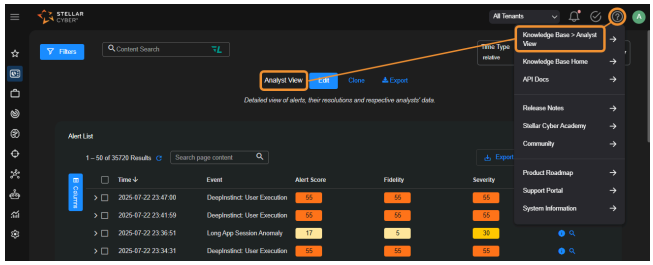

Content

The knowledge base content is organized by need to interact with the product. This helps you find content based on the task you need to perform. The menu is structured with overview and analysis topics first, as those are the most likely to be frequently used in the long term. Those menu options are followed by administrative and reference topics, which will hopefully be less needed over time as you use the product. This task-based structure augments the contextual links in the Stellar Cyber UI, which provide UI-oriented navigation of the knowledge base.

Task-based Navigation

Contextual Navigation

Searching

You can use simple keywords to search the knowledge base. Use quotes to search for adjacent words and use boolean terms, if more complex searches are required. For detailed guidance on boolean searches in the Stellar Cyber knowledge base, refer to **Searching the Knowledge Base**.

Early Access Program Features and Topics Under Development

Stellar Cyber is always developing new features and the documentation that goes with them. At times, you might see topics in the knowledge base covering a feature that is not yet available in your version of the Stellar Cyber Platform. This can happen in either of the following situations:

- The feature is part of an Early Access Program (EAP). These features are indicated with a special banner in the knowledge base like the one below:

  Early Access Program Feature. Contact your account manager to inquire about taking part in an Early Access Program.

- Stellar Cyber is actively developing a feature and is making its documentation available to gather feedback on the work in progress.
