Stellar Cyber 6.6.0s is now live! Discover all the updates in the release notes!

Performing Field Actions

In Stellar Cyber table views, many fields, such as URL, host, user names, and IP addresses, allow actions. You can access these options by clicking the field itself, or the **more** button ⋮ to the right of the field. Examples below illustrate the options that may appear. If the option is not applicable to the selected data, it is not displayed (such as a Whois lookup on an a private versus public IP address):

In certain parts of Stellar Cyber, IP addresses and hostname fields may not have a more ⋮ button. Click the field value itself to display the field actions menu.

Following are the possible actions:

- User Detail View
- Asset Detail View
- Whois Lookup
- Add as Including Filter
- Add as Excluding Filter
- *360* Panoramic View
- *VT* VirusTotal Lookup
- Copy to Clipboard

Typing In Values Manually

Note that many of the fields in the Stellar Cyber user interface accept values you type in manually in addition to those provided by a dropdown. This is true, for example, of the Field dropdown in the Add a Log Filter dialog box, as well as many others.

User Detail View

To see the user details:

1. Click ⋮ next to the **Username**. The **Actions** list appears.
2. Click 👁 **User Detail View**. You are immediately taken to the **User Details** page.

This action only appears if the user information is in the event record.

Asset Detail View

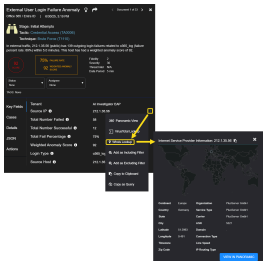

To see the asset details:

1. Click ⋮ next to an asset. The **Actions** list appears.
2. Click 👁 **Asset Detail View**. You are immediately taken to the **Asset Details** page.

This action only appears if the asset information is in the event record.

Whois Lookup

This menu option is displayed when the selected field is either a srcip, dstip, srcip_host or dstip_host and the IP address is in the public range. When applicable and you use the action, a dialog similar to below is displayed with the available lookup information.

Add as Including Filter

This action creates a filter to display only those events containing the value in the field. For example, to see only those events with the same source IP address as the event you're looking at:

1. Click ⋮ next to the **Src IP** field. The **Actions** list appears.
2. Click 🔍+. The filter is immediately applied and the page is updated.

Add as Excluding Filter

This action filters out those events containing the value in the field. For example, to remove events with the same source IP address as the event you're looking at:

1. Click ⋮ next to the **Src IP** field. The **Actions** list appears.
2. Click 🔍−. The filter is immediately applied and the page is updated.

360 View Panoramic

To open the panoramic view with the URL or IP address as the filter:

1. Click ⋮. The **Actions** list appears.

2. Click **360 View Panoramic**.

See About the Panoramic View for more information.

VT VirusTotal Lookup

To open a new tab looking up the URL or IP address on VirusTotal:

1. Click ⋮ next to the URL or IP address. The **Actions** list appears.
2. Click **VT VirusTotal Lookup**.

Copy to Clipboard

To copy the field value to your clipboard:

1. Click ⋮. The **Actions** list appears.
2. Click **Copy to Clipboard**.
