Stellar Cyber 6.6.0s is now live! Discover all the updates in the release notes!

Removing Tenants

Only administrative users with a Root scope and Super Admin or Platform Admin privileges can delete tenants and clear database indices on **System | Data Tenants**. All other types of users can see the page but cannot delete tenants or clear database indices.

When you completely remove a tenant from Stellar Cyber, all of the objects configured for it are automatically removed such as charts, reports, dashboards, connectors, custom log parsers, sensors, and admin users. As a safety measure, because the delete function is not reversible, a list of objects is displayed for review prior to completing the action.

- For objects that a tenant is allowed to access but is not the sole user (such as those assigned to **All Tenants**), the tenant is removed from the object; the object itself is not deleted.
- When the tenant being removed is the only remaining tenant in a group, that tenant group is also removed along with the partner user managing the group.
- Authentication objects associated with the tenant, such as IdP certificates are also automatically removed when the tenant and its users are removed.

Stellar Cyber also gives you the option to clear one or more of its database indices. This purges data in the **Records**, **Assets**, **Users** (that is, “Asset Users”), and **Cases**. For compliance purposes, you might need to keep this data for a certain length of time after deleting the tenant. If so, then leave all the indices unselected.

1. Select **System | ORGANIZATION MANAGEMENT | Tenants**.

   The table of tenants is displayed.

2. Select 🗑 on the row for that tenant.

   A Deletion Confirmation dialog box appears with a list of objects associated with the selected tenant. Note that certain objects are listed as a count, such as assets, rather than by name

3. Review the list and, optionally, visit the management page for the object to reassign it to another tenant, or **All Tenants**, or to export it (where applicable).

The delete is not reversible, so review the objects before you proceed.

- Automation | Automation (ATH playbooks)
- Reporting | Reports
- Respond | Scheduled Reports
- System | ORGANIZATION MANAGEMENT | Tenant Groups
- System | ORGANIZATION MANAGEMENT | Users
- System | DATA SOURCE MANAGEMENT | Data Filters | Log Filters
- System | DATA SOURCE MANAGEMENT | Sensors | Sensor Profiles
- System | DATA SOURCE MANAGEMENT | Sensors | Sensors
- System | DATA SOURCE MANAGEMENT | Traffic Filters | Custom Applications
- System | DATA SOURCE MANAGEMENT | Datata Filters | Traffic Filters | Application Groups
- System | Saved Objects | Watchlists
- System | Saved Objects | Queries and Filters
- System | Recipients
- System | Saved Objects | Saved Scripts
- System | DATA MANAGEMENT | Enrichments
- System | INTEGRATIONS | Connectors
- System | Saved Objects | Charts
- Dashboards | CREATION | Dashboards

4. Below the list of objects in the Deletion Confirmation dialog box, select any database indices you want to clear—**Records**, **Assets**, **Users** (that is, “Asset Users”), and **Cases**.
5. After you are ready to proceed with the delete, select **Yes, permanently remove this tenant**.

   When you purge data and delete a tenant, Stellar Cyber displays the progress of the data purge and tenant deletion in a Task List panel. If both tasks succeed, the task list indicates that the data was cleared and Stellar Cyber automatically removes the tenant from the **System | ORGANIZATION MANAGEMENT | Tenants** page. Stellar Cyber keeps any data not selected for deletion for the remainder of its configured retention cycle and then eventually deletes it as well.

   If one or both of the data purge and tenant deletion tasks are unsuccessful, the task list indicates that an error occurred. The tenant configuration remains on the Tenants page as an inaccessible entry with the reason for the failure summarized in the Message column. If this happens, contact Stellar Cyber Customer Services for assistance.
