Stellar Cyber 6.6.0s is now live! Discover all the updates in the release notes!

Respond Menu Overview

Stellar Cyber provides a few pathways for response actions. You can set up Automated Threat Hunting to trigger reports; you can define the nature of those reports using Dashboards, and you can take direct actions on certain events, depending on your deployment configuration. Use the following topics as a guide for working with the available response tools:

- **Automated Threat Hunting**
  - Automated Threat Hunting
  - Email Action Templates
  - ATH Example: Blocking a Port Scanning Source IP
  - ATH Example: Notifications for Case Scores
  - ATH Example: No Data From Sensor
  - ATH Example: Half-Opened Sessions
  - ATH Example: Pass the Hash
  - ATH Example: Log Source Inactivity
  - ATH Example: Reset TCP Connections after Detecting Threats
- **Response Action History**
  - Viewing Response Action History
  - Managing Firewall Actions
  - Viewing User Actions
  - Viewing Script Actions
  - Viewing Endpoint Actions
  - Viewing Email Actions
  - Viewing Webhook Actions
  - Managing Security Switch Actions
