Stellar Cyber 6.6.0s is now live! Discover all the updates in the release notes!

Rules Contributing to AWS Default VPC Configuration Alert 6.5.0

The following rules are used to detect the use of AWS default VPC settings. Any one or more of these will trigger the AWS Default VPC Configuration Alert. Details for each rule can be viewed by clicking the **More Details** link in the description.

Title	Description

AWS Default VPC Usage	Detects the use of AWS default VPCs. Default VPCs are automatically created by AWS in each region and come with preconfigured network settings that may not align with security best practices. They often have permissive default security groups, automatic public IP assignment, and Internet gateway configurations that can lead to unintended exposure of resources.
	
	More details
	
	Rule ID
	`aws_config_5`
	
	Query
	`{'selection1': {'configResourceType': 'AWS::EC2::VPC'}, 'selection2': {'configuration_isDefault': True}, 'condition': 'selection1 and selection2'}`
	
	Log Source
	Stellar Cyber AWS configured.
	
	Rule Source
	Developed internally by Stellar Cyber
	
	Tactics, Techniques, and Procedures
	TA0001, T1190
	
	References
	N/A
	
	Severity
	25
	
	Suppression Logic Based On
