Stellar Cyber 6.6.0s is now live! Discover all the updates in the release notes!

Rules Contributing to Suspicious OCI Bucket Public Access Type Configuration Alert 6.0.0

This topic covers a feature that is not available for all customers yet. See Early Access Program Features and Topics Under Development.

The following rules are used to identify suspicious public access type configuration of OCI buckets. Any one or more of these will trigger the Suspicious OCI Bucket Public Access Type Configuration Alert. Details for each rule can be viewed by clicking the **More Details** link in the description.

Title	Description

OCI Bucket Public Access Type Configuration	Identifies potential OCI bucket misconfiguration of public access type. A bucket is a container for storing objects in a compartment within a namespace. If a bucket that contains sensitive information is set to be public accessible, it can lead to subsequent data exfiltration.
