Stellar Cyber 6.6.0s is now live! Discover all the updates in the release notes!

Server Sensor Sizing Specifications

This article describes the resources required for the successful installation and operation of Stellar Cyber Server Sensors (agents).

- **Linux Server Sensor System Requirements**
- **Windows Server Sensor System Requirements**

Linux Server Sensor System Requirements

The Linux Server Sensor uses 5% of the host server's resources, including each CPU core, so the VM must have at least:

Component	Specification
Host CPU	Xeon Core 2 virtual cores (2.0 GHz or more)
Host RAM	12 GB
Available SSD Disk Space	128 GB

Windows Server Sensor System Requirements

The Windows host into which the Windows Server Sensor is installed must have at least:

Component	Specification
Host CPU	Xeon Core 2 virtual cores (2.0 GHz or more)
Host RAM	8 GB
Available SSD Disk Space	Minimum – 5 GB Recommended – 8 GB
