Stellar Cyber 6.6.0s is now live! Discover all the updates in the release notes!

Templates for Windows Server Sensors

Stellar Cyber provides predefined templates for Windows Server Sensor settings. These templates have been carefully configured to match common deployment scenarios. Once you have reviewed the settings in a template and seen how it operates in your environment, you can tailor the settings in individual channels to fit your needs using the instructions in **Configuring Standard Sensor Profiles**

The following templates are available for options in the **Windows** tab of the ADD/EDIT SENSOR PROFILE window:

- **Windows Detect Profile (Low Volume)**. The selection covers the minimal events required for all native detections in Stellar Cyber.
- **Windows Context Profile (Medium Volume)**. Adds events commonly used by third-party detection rules.
- **Windows Compliance Profile (High Volume)**. Covers all Windows events.

Each of these profiles collects a different set of logs/events and results in a progressively higher volume of data ingestion from **Low** to **Medium** to **High**.

If you find that you are ingesting a higher volume of data than you would like relative to your license limits, you may want to reconfigure these settings, keeping in mind that the **Low Volume** profile provides enough coverage for all native Stellar Cyber detections.

The settings for each template are summarized in the table below:

Channel			Notes	Windows Detect Profile	Windows Context Profile	Windows Compliance Profile
Security						
Collect Windows advanced security audit	**Account Logon Events**					

Channel			Notes	Windows Detect Profile	Windows Context Profile	Windows Compliance Profile
policy settings events.		Credential Validation	For UEBA alerts.	✔	✔	✔
		Kerberos Authentication Service	For UEBA alerts	✔	✔	✔
		Kerberos Service Ticket Operations		✔	✔	✔
		Other Account Logon Events				✔
	Account Management Events	Application Group Management				✔
		Computer Account Management		✔	✔	✔
		Distribution Group Management				✔
