Stellar Cyber 6.6.0s is now live! Discover all the updates in the release notes!

# Using Tenant Groups

You must have **Root** scope to use this feature.

Stellar Cyber allows you to create any number of Tenant Groups (**System | ORGANIZATION MANAGEMENT | Tenant Groups**). Tenant Groups allow partners to manage multiple tenants, assign users at each tenant, and view the data for all or individual tenants. A partner user is associated with a single Tenant Group in User Management, when that user account is created. That Tenant Group contains all the Tenants the partner manages. By default, the partner user's Tenant menu is set to view the whole group but can be switched to any tenant in the group.

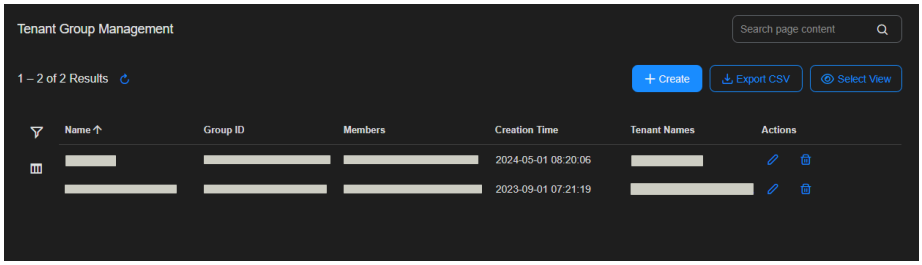

See the User Management page for information about configuring users.

See the Tenants overview page for general information about Tenants.

To perform bulk actions, assets and UBA users tables, partners in tenant group views must first switch from viewing all the tenants viewing the specific tenant. The bulk action options are disabled in the global view.

## Tenant Group List

When you select **System | ORGANIZATION MANAGEMENT | Tenant Groups**, Stellar Cyber displays a table of the existing tenant groups similar to the example below.

The columns are:

- **Name** – The name of the Tenant Group
- **Group ID** – The unique ID number for the Tenant Group

- **Members** – The Tenant ID numbers of the tenants in the group
- **Creation Time** – When the Tenant Group was created
- **Tenant Names** – The names of the tenants in the group
- **Action** – The actions that you can take for each Tenant Group

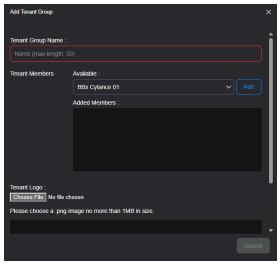

You can take the following actions:

- Select **Create** to create a new tenant. The **Add Tenant Group** dialog box (described below) appears.
- Select  to edit a tenant group. The **Edit Existing Tenant Group** dialog box, which is similar to the **Add Tenant Group** dialog box, appears.
- Select  to delete the corresponding tenant group. The group is immediately deleted.

See the Tables page for more information on working with tables.

## Adding and Editing Tenant Groups

When you add or edit a Tenant Group, a dialog box similar to the one below appears. This example is for adding a Tenant Group, but the same options appear in both dialog boxes.

To add a Tenant Group:

1. Enter the **Tenant Group Name**.

   Use a name that helps you remember the purpose for the group.

2. Select a tenant in the **Available** drop-down list.
3. Select **Add** to add the tenant.

   There is no limit to the number of tenants you can add.

4. Optionally select a **Tenant Logo**.

   This logo replaces the Stellar Cyber logo in both Executive Summary and Case reports generated for the tenant group or the tenants within the tenant group.

5. Select **Submit**.

   The button becomes active only when the Tenant Group Name and at least one tenant have been added.
