Stellar Cyber 6.6.0s is now live! Discover all the updates in the release notes!

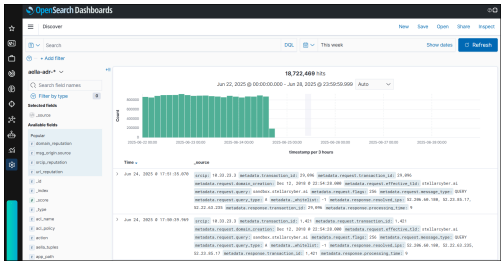

Using the Kibana Plugin

You must have **Root** scope to use this feature.

The Kibana plugin lets you analyze the Stellar Cyber data lake using Kibana without leaving Stellar Cyber. You do not need to log in to Kibana.

You can damage the Stellar Cyber data structure using these tools. Use caution. Commands that alter data should only be used by advanced users.

Navigate to **System | Kibana Plugin** to view the Kibana application displayed in an embedded window.

See the Kibana User Guide for full documentation of this tool.

Performing Searches for Index Patterns in Kibana

Keep in mind that when you enter index patterns to retrieve data from Stellar Cyber using Elasticsearch, you must use the following format:

`aella-<index_type>-*`

The `index_type` corresponds to one of the following Stellar Cyber indices:

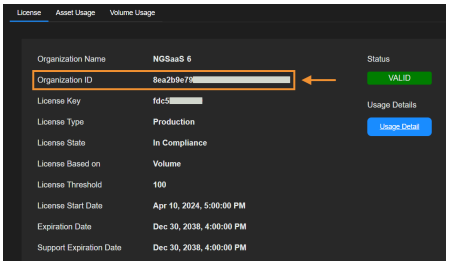

- **Alerts**: `aella-ser-*`
- **Assets**: `aella-assets-*`
- **AWS Events**: `aella-cloudtrail-*`
- **IDPS/Malware Sandbox Events**: `aella-maltrace-*`
- **Linux Events**: `aella-audit-*`

- **Scans**: `aella-scan-*`
- **Sensor Monitoring**: `aella-ade-*`
- **Signals**: `aella-signals-*`
- **Syslog**: `aella-syslog-*`
- **Traffic**: `aella-adr-*`
- **Users**: `aella-users-*`
- **Windows**: `aella-wineventlog-*`

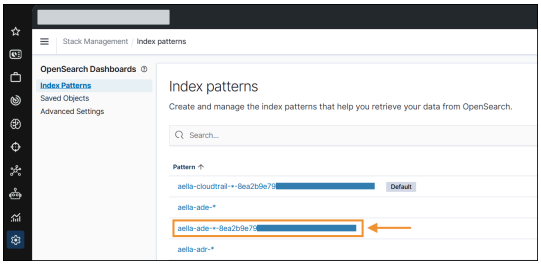

Tip: Supply Your Organization ID

If you do not see results appear when you supply one of the index patterns listed above, you may need to supply the first one or two characters of your Organization ID. You can find your Organization ID in either of the following ways:

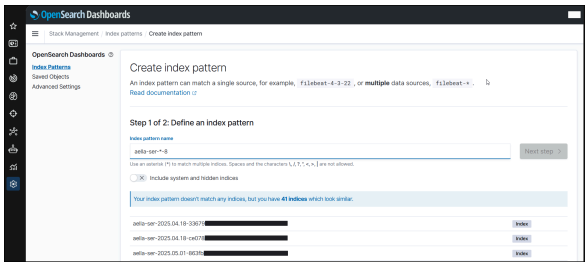

- Use the **System | ORGANIZATION MANAGEMENT | Licensing** page. For example:

- Look in **Stack Management | Index Patterns** in Kibana. The Organization ID is right after the **aella-<index>-*-** entry, as illustrated below:

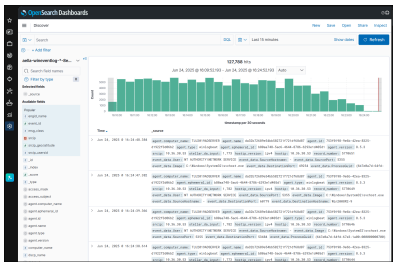

Here's an example of how a search for an index pattern looks when the first character of an Organization ID beginning with **8** is provided:

Sample Searches

Here is a sample search on an `aella-wineventlog-*-8ea2b9e79...` index:
