Stellar Cyber 6.6.0s is now live! Discover all the updates in the release notes!

Working with Dashboards

Learn more at Stellar Cyber Academy.

The following link takes you to a course on the Stellar Cyber Academy technical training portal where you can learn more about this topic by watching the suggested lessons.

P09 Creating Dashboards and Reports in Stellar Cyber (30m:00s)

PART 1: Working with Dashboards and Reports in Stellar Cyber (06m:00s)

Learn how dashboards in the Stellar Cyber Platform provide real-time insights by aggregating data from multiple sources. Understand how visual elements like heat maps support threat detection, while reports deliver structured insights for compliance and operational summaries.

PART 2: Using Dashboards and Reports for Threat Detection and Remediation in Stellar Cyber (07m:30s)

Discover how dashboards centralize security data for faster incident triage and threat response. Explore prebuilt dashboards for compliance and vulnerabilities, and see how exporting reports communicates findings to stakeholders.

PART 3: DEMO: Creating and Scheduling Custom Reports and Dashboards in Stellar Cyber (12m:45s)

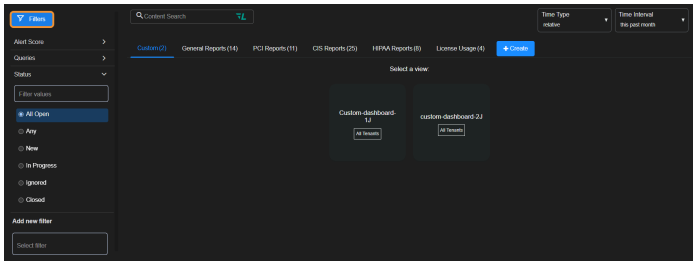

Watch a demonstration of creating custom reports and dashboards. See how to edit queries using the Query Builder, create data visualizations, and export reports as CSV or PDF files.

The first time you access a link on the portal during a session, you must log in to access content.

Stellar Cyber stores a vast amount of information that must be sorted, sifted, and presented clearly to be actionable. The Dashboards Hub (**Dashboards | CREATION | Dashboards**) is the starting point for working with dashboards. From the Hub you can locate and open any dashboard, create new custom dashboards, and manage existing ones. Custom dashboards let you define and view data on activity in your network in ways that accelerate comprehension

through visual clarity and clean design. You control which components to include—various types of charts, text boxes, counters, heatmaps, and tables—and you determine their number, placement, and layout within each dashboard.

Filters at the top left of this page are applied when you're viewing a dashboard. They are not applicable for filtering dashboards that have objects related to the filters.

You can define custom dashboards, add components—charts, text boxes, counters, heatmaps, and tables—to display data you find relevant, share your custom dashboards, and view predefined dashboards. All dashboards are accessible from the Dashboards Hub, which organizes them into the following categories:

- Custom Dashboards
- General Reports
- PCI Reports
- CIS Reports
- HIPAA Reports
- License Usage

Custom Dashboards

With custom dashboards you can create, use, and share visualizations in the following ways:

- See an existing custom dashboard
- Create a new custom dashboard
- Edit a custom dashboard
- Delete a custom dashboard
- Clone (and then customize) an existing dashboard
- Export a dashboard as a PDF
- Export a dashboard as a configuration
- Import a dashboard

Stellar Cyber restricts the time interval for dashboards configured to search through all indices to 24 hours to reduce the performance impact of such resource-intensive searches.

See an Existing Dashboard

To see an existing dashboard:

1. Select **Dashboards | CREATION | Dashboards** to open the Dashboards Hub.

2. Locate the dashboard using the **Recent** section, the **Explore** section, or the **All Dashboards** table. To show only custom dashboards, select the **Custom** category filter in the **All Dashboards** section.
3. Select the dashboard name to open it.

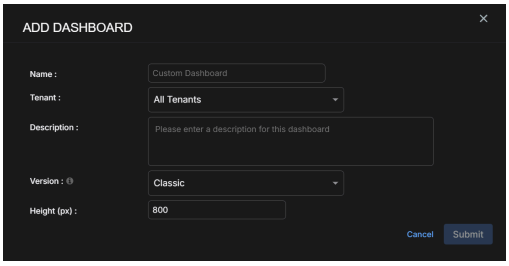

Stellar Cyber displays your selection.

Create a New Dashboard

To add a new custom dashboard:

1. Select **Dashboards | CREATION | Dashboards**.
2. Select **+ Create | Add New Dashboard**.

   The **Add Dashboard** dialog box appears.

3. Enter the following and then select **Submit**:

   Name: Enter a meaningful name for the dashboard.

   This field does not support multibyte characters.

   Special characters are not permitted in name fields for queries, watchlists, reports, or dashboards. Letters, underscores, spaces, dashes, numbers and periods are permitted.

   You cannot change the dashboard name after you create the dashboard.

   Tenant: Choose an individual tenant or **All Tenants**.

   Description: Enter a useful description about the purpose of the dashboard.

   Version: Choose either **Classic** or **New Layout**. The **Classic** layout uses a fixed-height structure. **New Layout** uses a grid-based layout system that supports configurable column formats (12, 16, or 24 columns) and drag-and-drop placement. This layout provides greater flexibility when organizing dashboard components and supports responsive display adjustments across different screen sizes.

   Height (appears when the **Version** is **Classic**): Use the default height of 800 pixels (px) or enter a custom height.

4. From the **View** setting that appears when the layout version is **New Layout**, choose one of the four responsive layout options to optimize the dashboard display on various monitor types:

   Auto (default) – Automatically selects a layout based on detected browser width

   Laptop – Optimizes for standard screen widths of 1440–1920 px

- Grid dimensions: 12 columns wide x 2-100 rows high
- Individual grid component dimensions: 2-6 columns wide x 2-4 rows high

Monitor – Optimizes for larger screen widths of 1920–2560 px screen widths

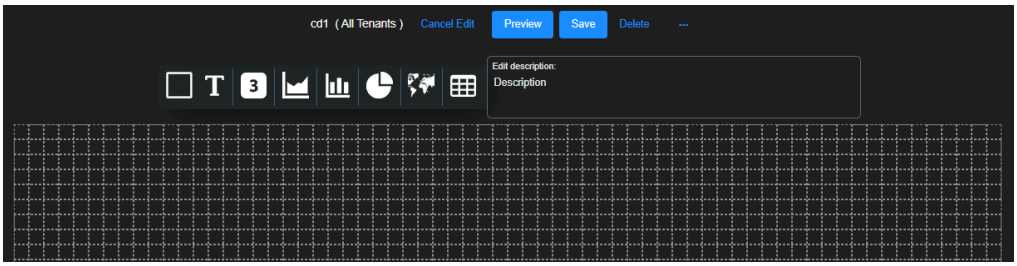

- Grid dimensions: 16 columns wide x 3-100 rows high
- Individual grid component dimensions: 3-6 columns wide x 3-4 rows high

Wide – Optimizes for ultrawide or large screen widths >2560 px for maximum data density

- Grid dimensions: 24 columns wide x 3-100 rows high
- Individual grid component dimensions: 4-6 columns wide x 3-4 rows high

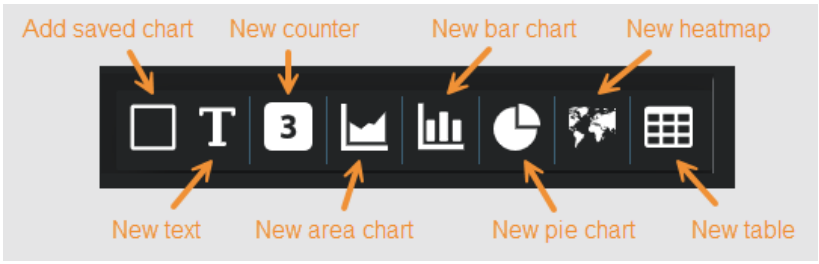

5. To view the dashboard canvas with options to add various types of charts, text boxes, counters, and tables, select **Edit**.

   Stellar Cyber displays your new dashboard with a blank canvas and buttons for adding components.

   The grid pattern only appears for the Classic layout.

6. Select a button to add a component (chart, counter, heatmap, text, or table). See the Dashboard Components page for details on each component.

7. Select **Save** to add the component to your dashboard canvas.

   Stellar Cyber displays the canvas with the new component, which you can then resize, move, edit, or delete.

   When you export a dashboard as a scheduled report, components are expanded so that all information is visible on the PDF (because you cannot scroll individual images within the PDF). For more control over the design of the PDF report, resize components in the layout area to remove scrollbars.

8. Move and add components.

   When you use the **New Layout**, you can select-and-drag components to different parts of the dashboard. As you do so, the other elements in the dashboard automatically adjust and adapt to its new position.

You can resize a component by hovering your cursor over an edge and then select-and-dragging resize handles in the two lower corners. If you reduce the size of one component, others might dynamically move into the vacated space.

You can also remove a component from a dashboard by selecting the **X** icon in its upper right corner.

When you use the **Classic** layout and place a component on the dashboard, you only need to position it near an intended area on the grid. When you save the dashboard, Stellar Cyber automatically snaps the component into alignment with the grid.

9. **Preview** the dashboard to see how it will look when saved.
10. **Save** the dashboard when you're done.

If you cannot see all of the components on your dashboard, adjust the layout and increase the dashboard height.

Edit a Custom Dashboard

To edit a custom dashboard:

1. Select **Dashboards | CREATION | Dashboards** to open the Dashboards Hub, then locate and open the custom dashboard you want to edit.
2. Select **Open in Visualizer | Edit**.

   When a dashboard is in Edit mode, Stellar Cyber replaces the **Edit** button with **Cancel Edit** and changes the dashboard view to the editing canvas with a group of buttons for adding components.

3. Select a button to add a component.

   See the Dashboard Components page for details on each one.
4. After you've configured a component, select **Submit** to add it to your dashboard canvas.

   Stellar Cyber displays the canvas with the new component, which you can edit or delete later.
5. Add more components to the dashboard and rearrange them if you want.

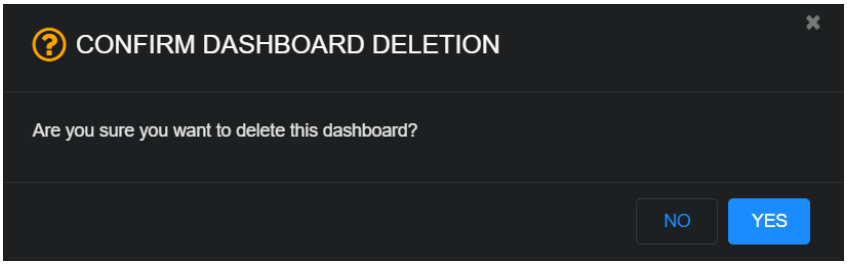

6. Select **Preview** to see your changes.
7. Select **Save** when you[redacted]one to save your changes or select **Cancel Edit** to abandon all changes.

Delete a Custom Dashboard

To delete a custom dashboard:

1. Select **Dashboards | CREATION | Dashboards** to open the Dashboards Hub.
2. In the **All Dashboards** section, select the **Custom** category filter and then select the custom dashboard that you want to delete.
3. Select the **Delete** button.

   The **Confirm Dashboard Deletion** dialog appears.

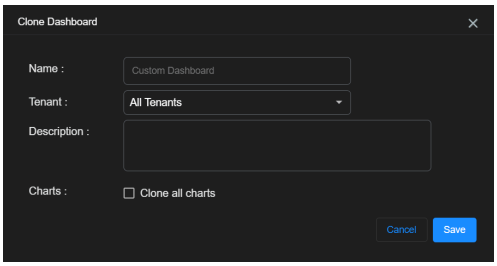

4. Select **Yes** to immediately delete the dashboard or **No** to cancel the deletion.

Clone a Dashboard

1. Select **Dashboards | CREATION | Dashboards** to open the Dashboards Hub, then locate the dashboard you want to clone in the **All Dashboards** table and open it.
2. Select the **Clone** button.

   The **Clone Dashboard** dialog box appears.

3. Enter the following and then select **Save**:

   Name: Enter a name for the cloned dashboard.

   This field does not support multibyte characters.

   > Special characters are not permitted in name fields for queries, watchlists, reports, or dashboards. Letters, underscores, spaces, dashes, numbers and periods are permitted.

   Tenant: Choose an individual tenant or **All Tenants**.

   Description: Add a meaningful description of the cloned dashboard for future reference.

Clone all charts: Select the check box to **Clone all charts** from the source dashboard.

If you are cloning a dashboard for which you do not have edit permissions, make sure you select the **Clone all charts** option if you intend to edit the charts. Otherwise, you won't be able to edit the charts in the cloned dashboard because they do not belong to your account.

The new dashboard is saved and becomes accessible from the **Dashboards Hub** under the **Custom** category. You can now edit it as with any custom dashboard.

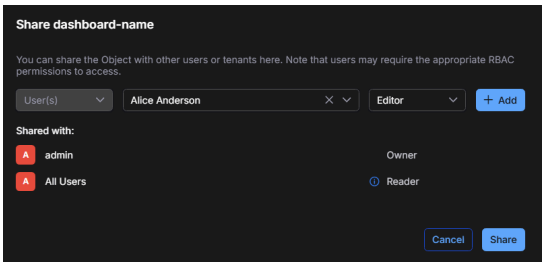

Share a Dashboard

To configure sharing for a dashboard, you must have Owner or Editor permissions for it.

To share a custom dashboard:

1. Select **Dashboards | CREATION | Dashboards** to open the Dashboards Hub, then locate and open the custom dashboard you want to share.
2. Select the **Share** button.

   The **Share** <dashboard-name> dialog box appears.
3. Assign **Editor** (read/write) or **Reader** (read-only) permissions to specific users.

   These settings determine which users can edit or view the dashboard. The owner retains full control and can modify or revoke shared access at any time. For complete information about global defaults and dashboard-level permissions, see **Configuring Object-Level Sharing and Access Control**.

Export a Dashboard as a PDF / CSV

To export a dashboard:

1. Select **Dashboards | CREATION | Dashboards** to open the Dashboards Hub, then locate and open the dashboard you want to export.
2. Select **Export** and choose the applicable option:
   - **Export PDF / CSV**: For dashboards/reports without tables, you are offered the option to **Export as PDF**. If the dashboard has one or more tables, the export also downloads a CSV file, you are offered the option to **Export as PDF / CSV**.

     Stellar Cyber converts the page to a PDF and displays it in another browser tab from where you can download it. If applicable, a CSV file is downloaded directly to your desktop.

- **Export as Enhanced PDF / CSV** 6.0.0 : When you choose this option, the PDF of the ex[illegible]ed dashboard offers several enhancements over the standard PDF export:
    - Each dashboard component appears on a dedicated page so that all the details in the rendered content are clearly visible.
    - The PDF contains a table of contents that lets you link directly to whatever specific component you want to see.
    - The rendering of tables supports multi-line values and text wrapping so that data isn't truncated.
    - Wide tables span multiple pages when necessary to ensure that all columns and the data in them are displayed.
- **Configuration**: For selected dashboards/reports, you might also be offered the option to **Export as Configuration**. In this case, a JSON file is created for you to save on your local system. From there you can import it within the Dashboards | Creation | Dashboards page on other systems.

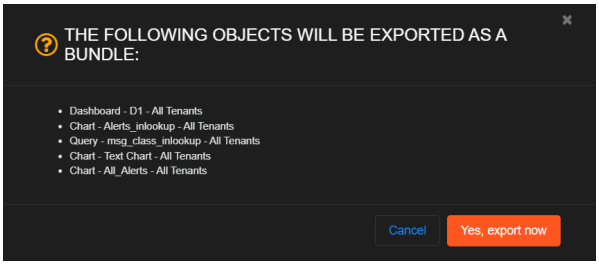

You must enable pop-ups for Stellar Cyber to display the PDF.

Export a Dashboard as a Configuration

You can export a dashboard to share it with another system or another tenant.

1. Select **Dashboards | CREATION | Dashboards** to open the Dashboards Hub, then locate and open the custom dashboard you want to export.
2. Select **Export** and then choose **Export as Configuration**.

   A confirmation appears.

3. Review what will be exported.

   Stellar Cyber exports all charts in the dashboard and all associated queries.

   The tenant is set to **All Tenants** regardless of the tenant when you export. You can set the tenant when you import.

4. Select **Yes, export now**.

   The dashboard is exported as a JSON file to your desktop.

Import a Dashboard

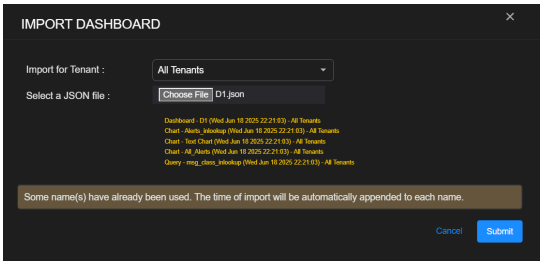

You can import a dashboard that was saved in JSON format.

1. Select **Dashboards | CREATION | Dashboards**.

2. Select ➕ **Create** and choose **Import Dashboard**.

   The **Import Dashboard** dialog box appears.

3. Choose an individual tenant or **All Tenants**, select **Choose File**, and then select the JSON file to import.

> If you have duplicate dashboards, charts, or queries in your system, Stellar Cyber automatically appends the import time to the name of each object.

4. Select **Submit**.

Stellar Cyber imports the dashboard and displays it.

Dashboard Categories

Stellar Cyber provides over 60 predefined dashboards in the Dashboards Hub (**Dashboards | CREATION | Dashboards**), grouped into categories that support compliance monitoring, threat detection, operational oversight, and platform management. These dashboards offer curated visualizations that help you assess risk, measure performance, and support regulatory standards. In addition, the Custom category allows you to build dashboards tailored to your unique security and business requirements.

Use the category filters in the **All Dashboards** section of the Hub to narrow the dashboard list to a specific category.

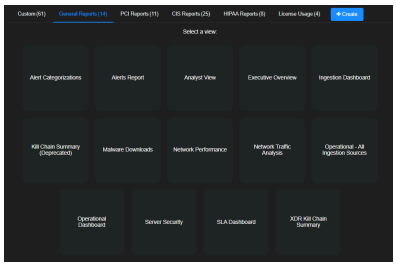

Custom

Select the **Custom** category filter to see user-defined dashboards. You determine the layout and content using a variety of components such as charts, counters, tables, and heatmaps. These dashboards are fully configurable, allowing tailoring to specific visibility needs, roles, or workflows.

General Reports

Select the **General** category filter to see the dashboards that provide operational visibility across your deployment.

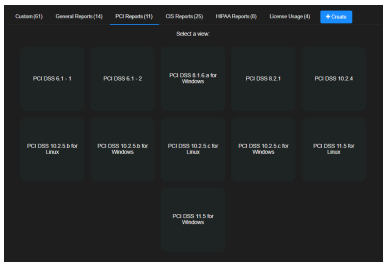

These dashboards display high-level data on alerts, cases, anomaly detection, sensor activity, and detection performance. Use them to monitor overall system health, analyst activity, and trends across tenants.

PCI Reports

Select the **PCI DSS** category filter to see dashboards related to the Payment Card Industry Data Security Standard (PCI DSS).

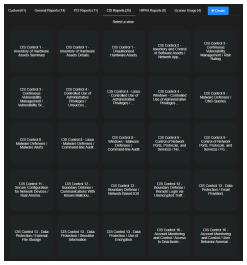

These dashboards help you monitor and report activities relevant to PCI compliance, such as access control, authentication, system logging, and data handling. They support internal audits and external assessments by aligning dashboard content with PCI control categories.

CIS Reports

Select the **CIS Controls** category filter to see dashboards aligned with the Center for Internet Security (CIS) Controls. Dashboards under this category are mapped to CIS benchmarks and controls, such as secure configurations, account monitoring, and access management.

These dashboards visualize asset behavior, login events, privilege use, and configuration compliance in accordance with CIS best practices. Use them to evaluate your adherence to foundational cybersecurity hygiene and hardening guidelines.

HIPAA Reports

Select the **HIPAA** category filter to see dashboards focused on compliance with the Health Insurance Portability and Accountability Act (HIPAA). Dashboards here help healthcare organizations monitor controls related to protected health information (PHI).

These dashboards track activity related to the protection of health information, including unauthorized access attempts, account usage, and system events that may impact confidentiality. Use them to support incident tracking and safeguard compliance in regulated healthcare environments.

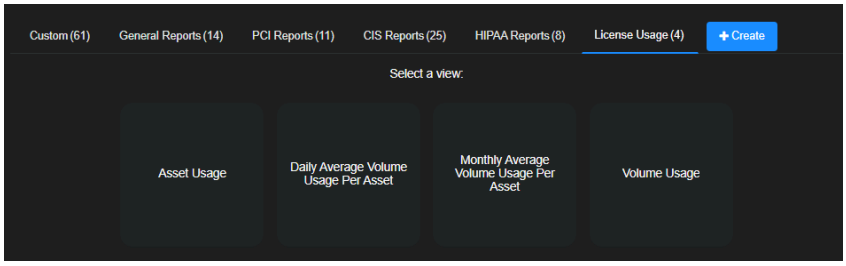

License Usage Reports

Select the **License** category filter to see dashboards that show how your deployment uses Stellar Cyber licensing resources.

License Usage reports are visible from the **Reporting | Reports | License Usage** tab.

These dashboards present metrics on data ingestion, retention, sensor traffic, and tenant-level license distribution. Use them to ensure license utilization stays within entitlements and to plan for scaling across tenants or service tiers.

Some of the dashboards in the License Usage tab are only available as part of an Early Access Program and might not appear in your version of the Stellar Cyber Platform. Contact your account manager to inquire about taking part in an Early Access Program.
